PROBLEM STATEMENT

A deepfaked CFO can talk honest staff into wiring crores, **and nothing connects the call to the payment.**

HOW THE FRAUD UNFOLDS

synthetic scenario

09:12 · GMAIL

Lookalike email

From kestrelinfra-group.co, a lookalike domain, so **SPF, DKIM, DMARC all pass.**

11:30 · VIDEO

Deepfake "CFO"

Face and voice cloned: "Confidential deal. Pay today, tell no one."

11:52 · ERP

Brand-new account

₹5 Cr to "Meridian Advisory LLP", an account **never paid before.**

12:05 · BANK

Money leaves

The convinced AP maker releases it. **Recovery needs reporting within hours.**

IN THE PUBLIC RECORD

US$25.6M

lost by Arup (Hong Kong, Jan 2024) after **one video call with a deepfaked CFO**

15	5	~1 wk
transfers	accounts	to notice

Source: South China Morning Post, May 2024

TARGET USERS

Buyer: Indian mid-to-large enterprises with central treasury / AP

AP / Treasury maker

The deceived user. Releases payments and needs **zero friction on normal days.**

CFO / Authority

The impersonated person. **Confirms or denies in seconds,** from anywhere.

Fraud analyst

Investigates holds and must **report to 1930 within the golden hour.**

Built on Google Cloud

SOLUTION

VeriFi AI holds a risky payment until **the person the instruction claims to come from** confirms it on their own phone, with a **passkey bound to that exact amount and account.**

01

Trace

Gmail and Meet signals become a **graph of where every bank account came from.**

POWERED BY

Gmail API · Meet API · Spanner Graph

02

Decide

Explicit rules plus an explainable risk score. **Routine payments pass with zero friction.**

POWERED BY

Gemini · Cloud Run

03

Confirm

The **real authority, never the requester,** approves or denies with a passkey bound to amount + account.

POWERED BY

Firebase FCM · Passkeys

04

Respond

Tamper-evident evidence and a **1930 / cybercrime.gov.in incident pack in under two minutes.**

POWERED BY

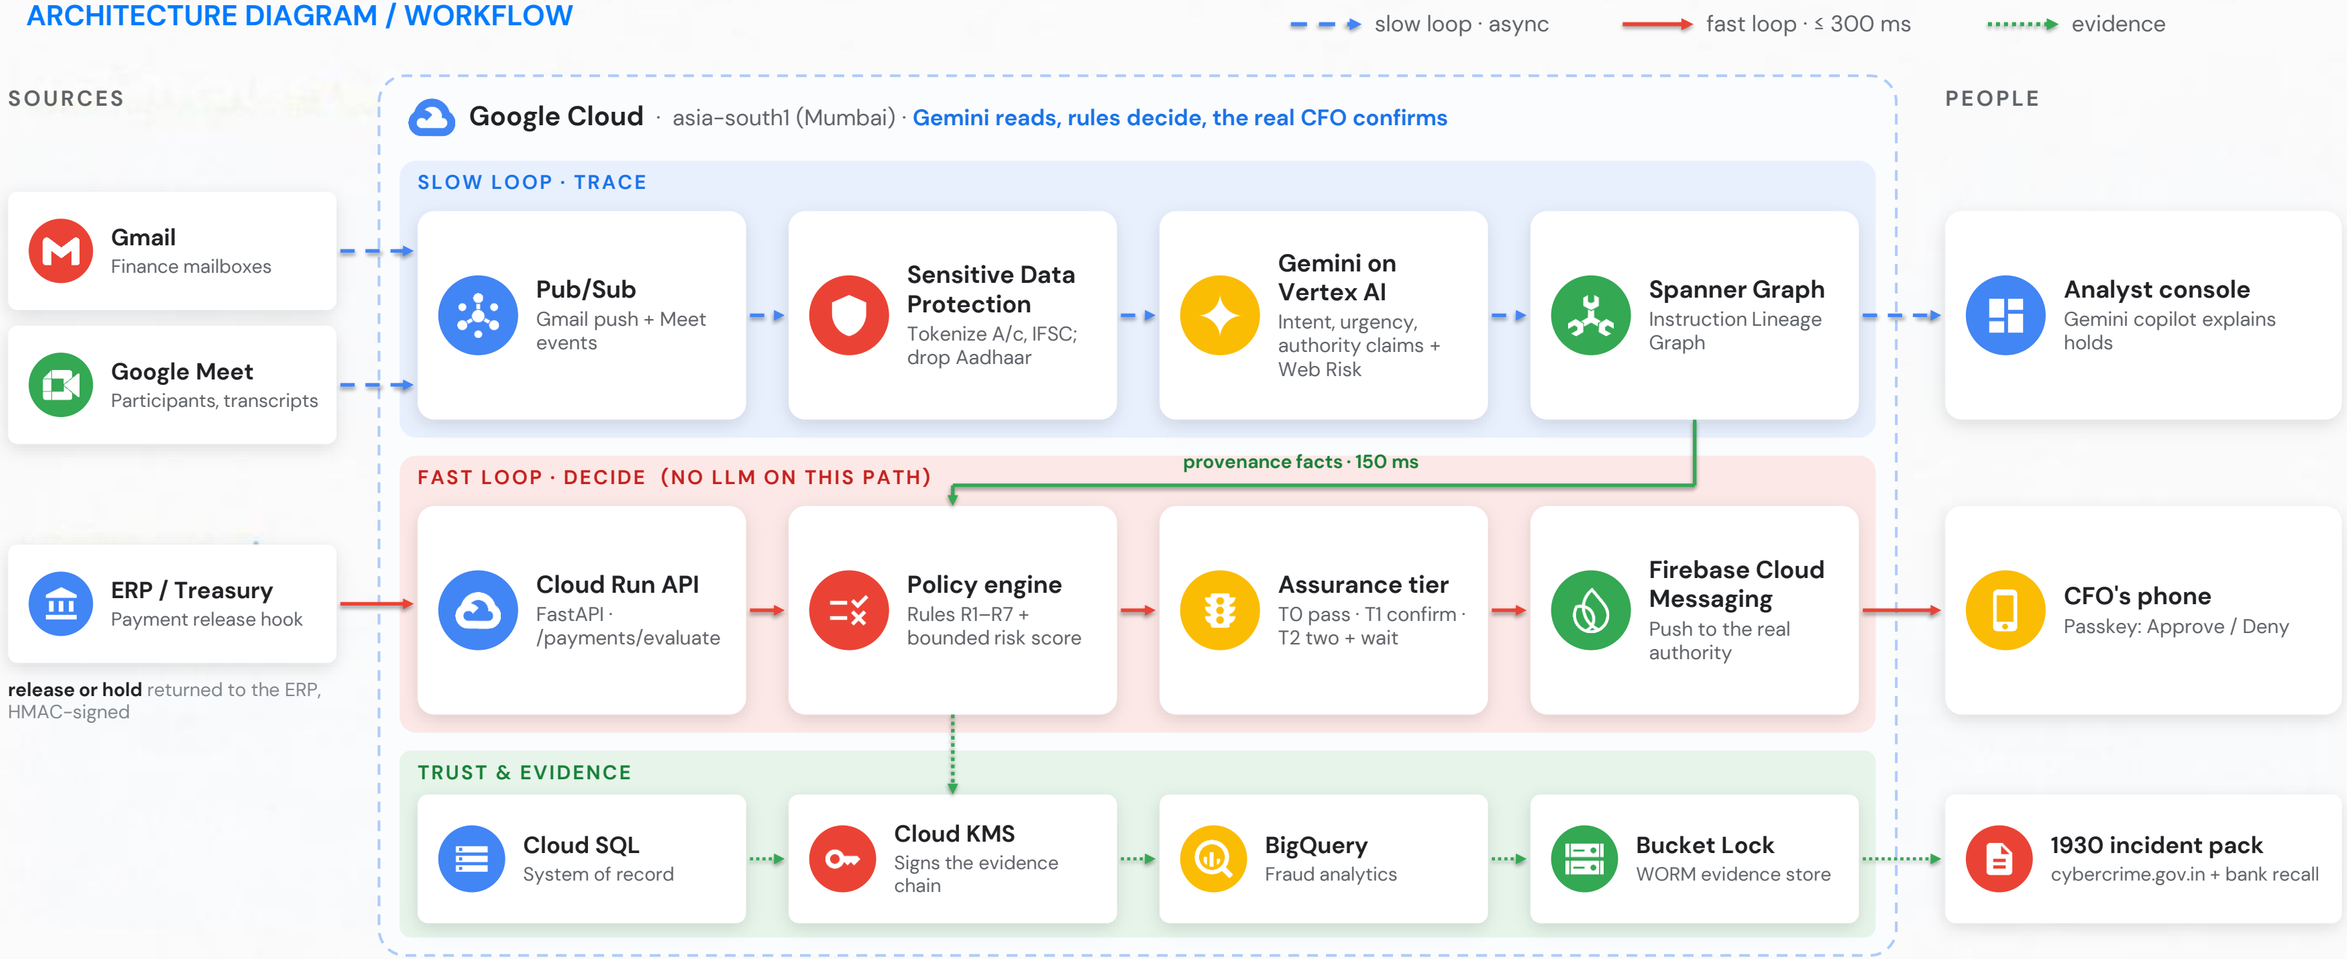

Cloud KMS · Bucket Lock · Gemini

Detectors tell you a call might be fake. **VeriFi makes sure money can't move because of it.**

Built on Google Cloud

TECHNICAL APPROACH

ARCHITECTURE DIAGRAM / WORKFLOW

Built on Google Cloud

TECH STACK

FRONTEND

- Next.js + TypeScript
- Approver PWA
- Analyst Console

BACKEND

- FastAPI · Python
- Pub/Sub workers
- Google Gen AI SDK

DATABASE

- Spanner Graph
- Cloud SQL Postgres
- Cloud Storage

AUTH & API

- Passkeys (WebAuthn)
- Firebase Auth + FCM
- Cloud KMS signing

DEPLOYMENT

- Cloud Run · Mumbai
- Firebase App Hosting
- Cloud Build CI/CD

GOOGLE AI LAYER

Gemini does the reading; **explicit rules make the decision.**

- **Gemini on Vertex AI** structured extraction of intent, urgency, authority claims
- **Gemini analyst copilot** explains each hold; drafts the 1930 pack + bank recall
- **Sensitive Data Protection + Web Risk** tokenize PII; flag lookalike domains

CONFIGURABLE BY DESIGN

Google by default. Every layer sits behind an adapter, **swapped in config.**

LLM	Gemini · Vertex AI	⇄	Claude · local model
Graph	Spanner Graph	⇄	Neo4j AuraDB
Evidence	Cloud KMS + Lock	⇄	AWS KMS + S3 Lock
Push	Firebase FCM	⇄	Web Push

Built on Google Cloud

IMPACT & SCALABILITY

Real impact

Stops crore-scale deepfake and BEC fraud **before the money leaves,** not days later.

More users

Routine payments pass untouched; **only risky ones need one tap** from the real CFO.

Built to scale

Serverless on Cloud Run: **≤ 300 ms decisions,** no LLM on the fast path.

ROLLOUT PATH

UDAIPUR

Shadow-mode pilots with local enterprise finance teams.

RAJASTHAN

MSME exporters, cooperative banks and state enterprises.

INDIA

Every NEFT / RTGS / IMPS release, wired to 1930 reporting.

PILOT PLAN

60-day shadow mode

Runs on the customer's own data; **never blocks a payment.**

Calibrate

Tune weights and thresholds **per customer, from real outcomes.**

Go live

Gate the payment-release step through an ERP API hook.
